

Michael Adams

SENIOR SOFTWARE ENGINEER

Email | GitHub | LinkedIn | Seattle, WA

Summary

Highly accomplished **Senior Software Engineer** with **10+ years** of experience in leading the design, development, and launch of high-impact products at premier companies such as **Google** and **Epic Systems**. Proven expertise in frontend development, **Generative AI**, support software, **cloud development**, and modern healthcare IT systems. I've led small teams in delivering well-designed, performant, and maintainable software. I'm passionate about **user experience** and have both delivered bleeding-edge technology and maintained legacy systems. I'm well aware of the positive impact a good **developer experience** has, from team morale all the way to product quality, and so have made that a priority throughout my career.

Experience

Senior Software Engineer

Seattle, WA

GOOGLE

2021 - 2024

- Designed and served as Lead Engineer for the **Generative AI** and live chat frontend in the support space.
- Led a small team in developing and launching Google Cloud's next-generation chat support platform, significantly improving the customer experience while reducing operating costs.
- Launched the revamped Google Cloud support platform, driving modernization and user experience improvements throughout the platform.

Software Engineer

Verona, WI

EPIC SYSTEMS

2014 - 2020

- Designed and developed a generalized infrastructure for telesitter video vendors. This allowed for the seamless integration of new video vendors without extra engineering, reducing onboarding costs for both vendors and hospitals.
- Spearheaded improvements to the developer experience across the company. This included adding custom hot-reloading, streamlining the integration with an antiquated version control system, and reducing the boilerplate needed for new development.
- Significantly improved the ASP.NET backend performance across the fleet via the use of comprehensive profiling and leaning heavily on compiler optimizations.
- Served as the lead architect for a flagship telemedicine product that enabled hospitals and clinics to pool their resources virtually, enabling highly-available virtual care.
- Acted as Principal Engineer for the research, development, and successful launch of Epic's first dedicated endocrinology module.
- Developed an interactive graphic of a patient's support network to improve care coordination.
- Optimized the performance of the core graphing infrastructure.

Skills

Languages

TypeScript · JavaScript · Python · Java · C# · Rust · SQL

Frontend

Angular · React · CSS/SCSS · Accessibility

Backend

ASP.NET · RESTful APIs · Microservices · Google Cloud Platform (GCP) · CI/CD

Education

University of Tennessee

Knoxville, TN

B.S. IN COMPUTER SCIENCE

2010 - 2014
